

- **GUI** - The Graphical display that creates the main game loop, shows the scrabble board, player hand, and scores.
- **Main Game Loop/Scrabble Game** - The central controller that manages game flow, controls player turns, holds logic for valid moves, and calculates the score of each play.
- **Board** - Reads in from standard input and stores each tile along with its multipliers (letter or word).
- **Player** - Contains a hand of letters to be played, places letters onto the board, and draws new letters from the bag.
- **Computer** - Contains a tray of letters to be played, determines and plays the highest scoring move after each player turn, and draws letters from the bag.
- **Bag** - Initializes all the letters and their distribution, and distributes letters each time a player draws.
- **Dictionary** - A Trie data structure holding all valid words, used to search and verify if a word is valid.
- **Input State** - Encapsulates input from the mouse to be used in the game.
